

New Project: Database Project

Positions: 1-PM, 3 SQL Server 2005 64 bits Developers

Project Location: Orlando, Florida

Problem: Experiencing some performance issues with the database. Slows down many times a day and sometimes gets frozen for some seconds and then everything comes back to normal. The problem happens randomly during the day.

Application: Retail (SAP). The database is accessed by 60 users at the same time.

Project Delivery: Basically we need somebody to analyze and monitor our database and tell us what should be done to fix the problem. What is the cost for that and how it works?

Send Resume and Past Performance to [management@infradant.com](mailto:management@infradant.com)
